

Dear Claire

Further to our submission via the Planning Portal today I am enclosing a brief description of the required amendments to the existing approval:-

The existing approval has been amended to reflect the ground floor layout, on the original approval the central ICT/Hub space was not wholly a double height space and the new application addresses this issue. It was only when we prepared the three dimensional drawings did the School appreciate the plan and the associated volumes. We were then requested to provide an alternative design which addressed this issue. The resultant drawings enclosed do not increase the area of the extension, but merely increases the volume of the central hub, the high level fenestration has been reduced slightly to avoid glare and overheating and has introduced some western red cedar panels which continue the philosophy developed with the original school.

Regards

Stephen Charles
