Dear Phil,

**Wakerley Quarry  
Storm water flow attenuation/ dust suppression pond adjacent to access road  
Non-Material Amendment Application**

In respect of the scheme to create additional water bodies adjacent to the quarry access road, the proposal sought to contain any excavations within the confines of the permitted scheme (i.e. stay within the mineral extraction Phase E) and establish the screening mound (Bund 9) to the exact dimensions of that mound as that previously approved (as delineated on Fig 7b Rev A, a copy of which is attached for ease of reference).

We have however subsequently noticed an error on the submitted Drg No W4/17/NMV/02 which has unfortunately shown Bund 9 narrower than "permitted" which will either mean the height of the mound cannot be achieved or the northern outer face will have to be at a steeper gradient. This was a result of a simple drafting error and accordingly I enclose a revised **Drg No W4/17/NMV/02-A** which I trust you can substitute.

This does not affect any previous comments regarding impact on ecology (as the mound simply extends further into an arable field) and is no nearer the badger setts previously identified.

Yours sincerely,

**John Gough**  
Planning Director
